

The Intel StrongARM PCI Development Kit gives embedded system designers a time-to-market boost by integrating all key product technologies in a single development environment. A StrongARM SA1110 processor provides the processing power, while a Xilinx® Spartan™-II SC2S100 implements a glueless interface between the SA1110 processor bus and the industry-standard PCI bus. Along with the hardware resources, Avnet Design Services provides IP for PCI, SDRAM control and the StrongARM interface as a starting point for your specific application. Of course, we can also provide engineering consulting services, help you to quickly customize your design to further speed your time-to-market.

The Intel StrongARM Development Kit includes:

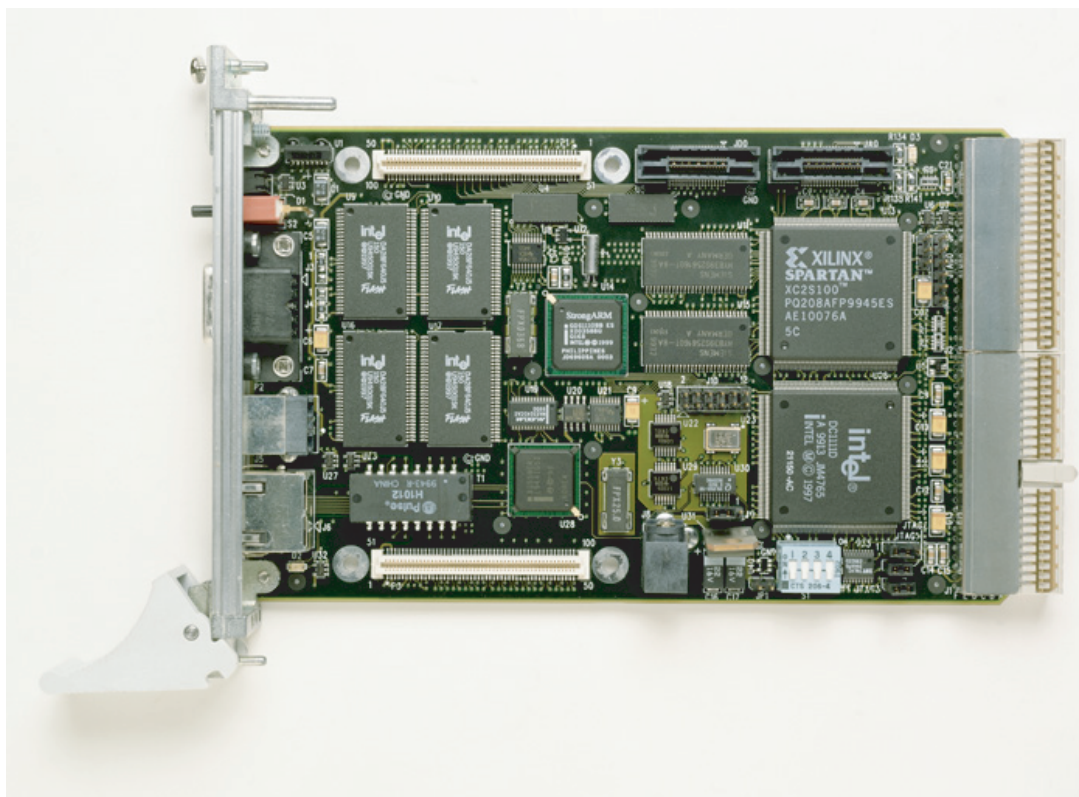

- Intel StrongARM PCI development board
 - User's guide
 - Schematics
 - Bill of materials

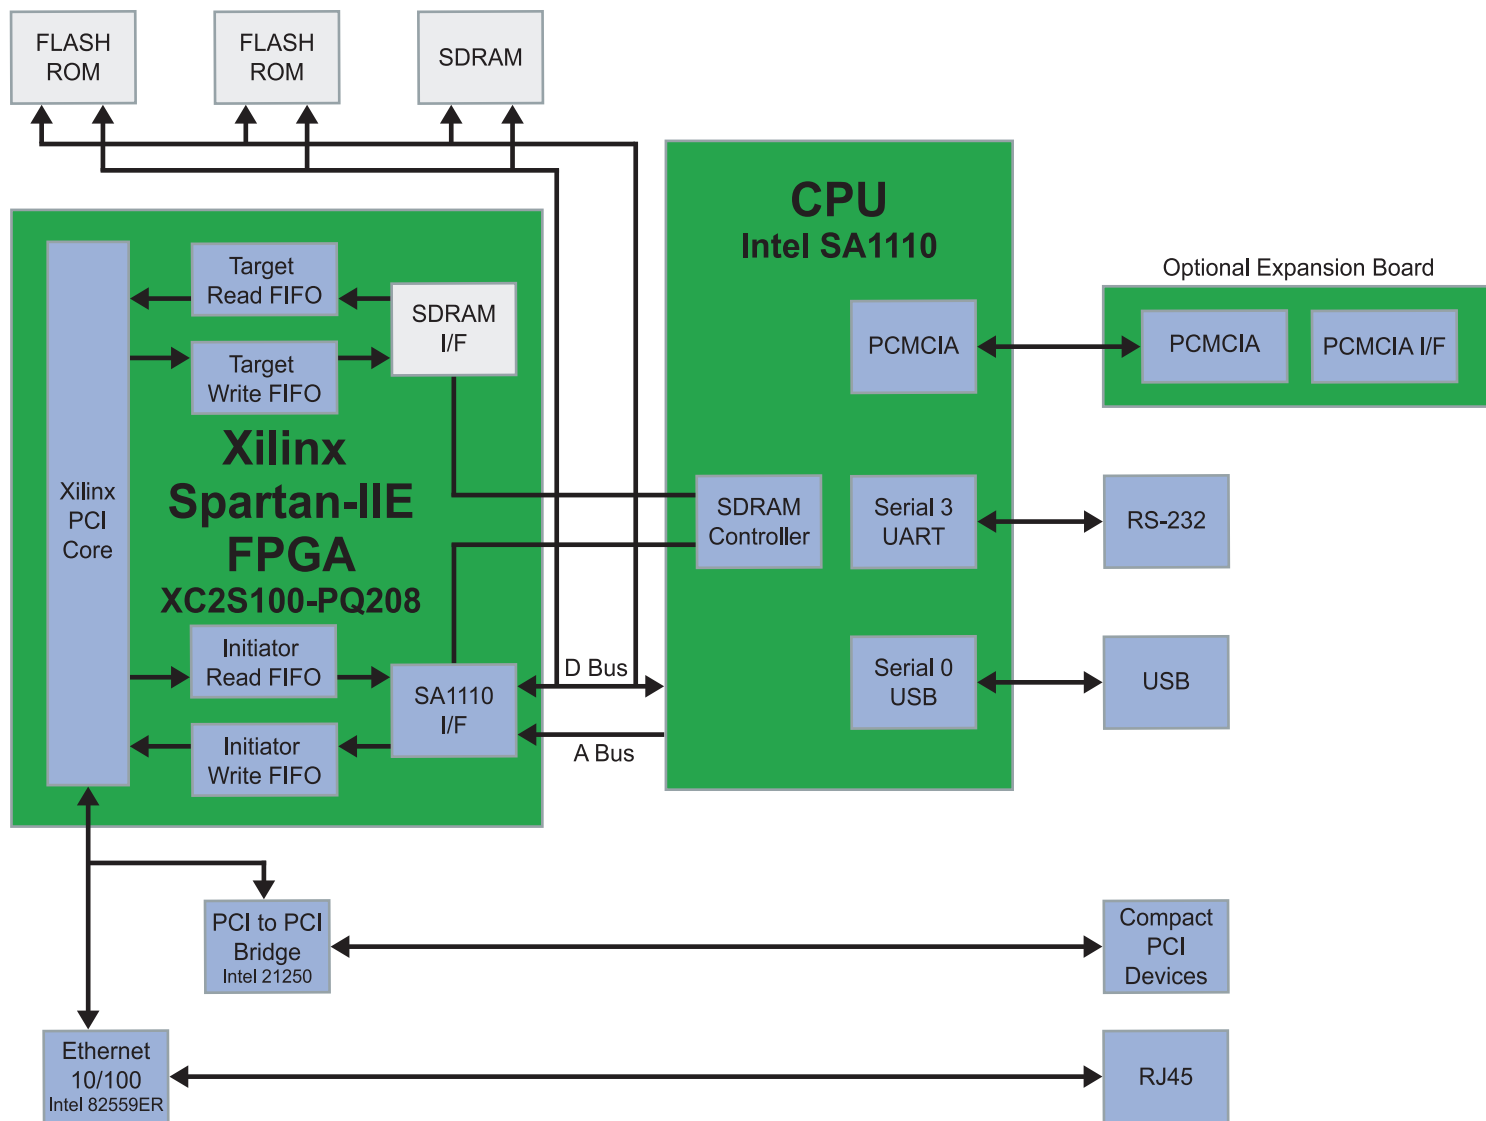

Features:

- ▲ Xilinx XC2S100 Spartan-II FPGA
- ▲ 64MB SDRAM (16Mx32)
- ▲ 32MB of system FLASH (8Mx32)
- ▲ 32MB user selectable Boot ROM
- ▲ RS-232 serial port interface
- ▲ Ethernet port
- ▲ USB client support
- ▲ Ability to support PCMCIA cards (adapter card required)
- ▲ IrDA support ability
- ▲ WinCE compatible

Target Applications:

- ▲ Compact PCI
- ▲ Windows® CE
- ▲ Handheld instrumentation

Ordering Information:

Part Number	Hardware	Resale
ADS-ISTA-PCI-KIT	Intel StrongARM PCI Development Kit	\$8,995.00 USD
