There are two versions of the VSB manual, since the UNIX and NT versions of VSB vary somewhat. Note that VSB is not supported on AIX.

Model Datasheets

All SmartModels (including FlexModels) come with datasheets that provide detailed information about how to use them. This information supplements the general information about SmartModels and FlexModels provided in the [SmartModel Library User's Manual](#) and [FlexModel User's Manual](#).

Searching PDF Files

You can search for a text string within a single PDF document or entire document set using the Acrobat Reader search icons. These icons appear at the top of the Acrobat Reader window.

Note

Use the Acrobat Reader as a standalone application rather than as a plug-in to a web browser, so that you can access the toolbar and pull-down menus.

If you are using Acrobat Reader with the Search plug-in, you can perform full-text search across the entire SmartModel documentation set. If you are using the Acrobat Reader without a Search plug-in or viewing this file online, you can still perform a find-type (serial) search, but only within a single document.

The file you are currently viewing ([intro.pdf](#)) is preconfigured with a Search index file called [INDEX.PDX](#), which enables the full-text-search function. The hyperlinks and Search index should work properly as long as you are viewing [intro.pdf](#) from one of the following locations:

- The root level of your SmartModel CD-ROM ([/manuals/intro.pdf](#)).

- The installed network location of your SmartModel software (\$LMC_HOME/doc/SmartModel/manuals/intro.pdf).
- A location on your system where you copied the entire contents of the manuals directory from the root level of your SmartModel CD-ROM.

The full-text search index does not work when you are viewing intro.pdf from within a Web browser.
