

Cypress Delta39K™ Evaluation Kit

The Cypress Delta39K Evaluation Kit from Avnet Design Services speeds time to market for designers, offering a platform to develop and test products that are targeted to the Cypress Delta39K CPLD family. This family of CPLDs at FPGA Densities™ allows you to combine the high speed, predictable timing, and ease-of-use of a CPLD, with the high density and low power of an FPGA. Based on a 0.18μ, 6-layer metal process, and densities ranging from 30,000 to 200,000 usable gates, Delta39K is up to 6x the density of any other CPLD - while maintaining fast pin-to-pin propagation delays of just 7ns and true system speeds of 233MHz. Delta39K CPLDs are the first to offer large blocks of single-port, dual-port and FIFO communications RAM. Armed with Spread Aware™ Phase Locked Loop (PLL) and programmable I/Os these In-System Reprogrammable (ISR™) CPLDs are supported by the industry leading Cypress Warp™ design tools. The evaluation board features an analog interface circuit, an RS-232 port, switches, LED displays and expansion capability. To create a complete development environment, the kit also includes a copy of the Warp™ software package and a programming cable.

The Cypress Delta39K Evaluation Kit includes:

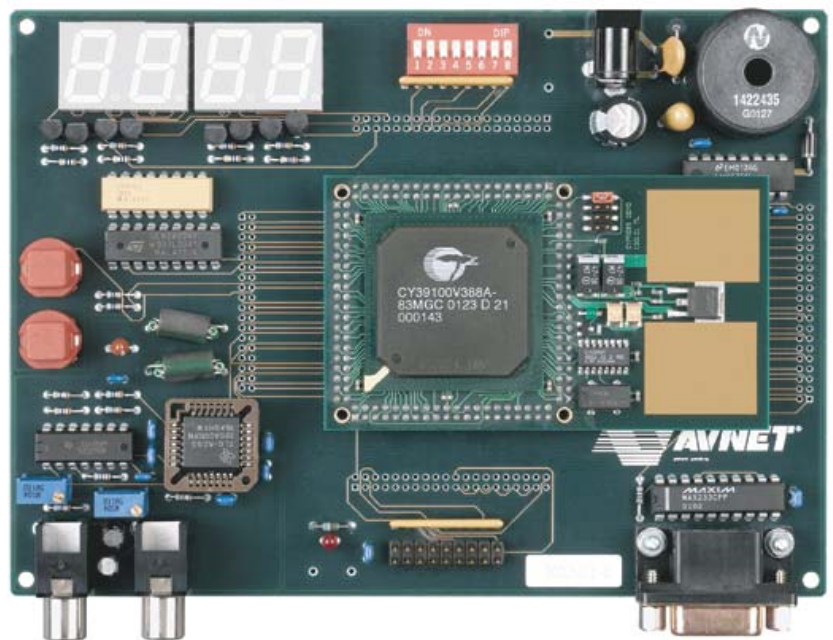

- Cypress Delta39K evaluation board
 - Users guide
 - Schematics
- Source code for sample designs
- Cypress Warp™ design software
- Cypress UltraISR™ programming cable

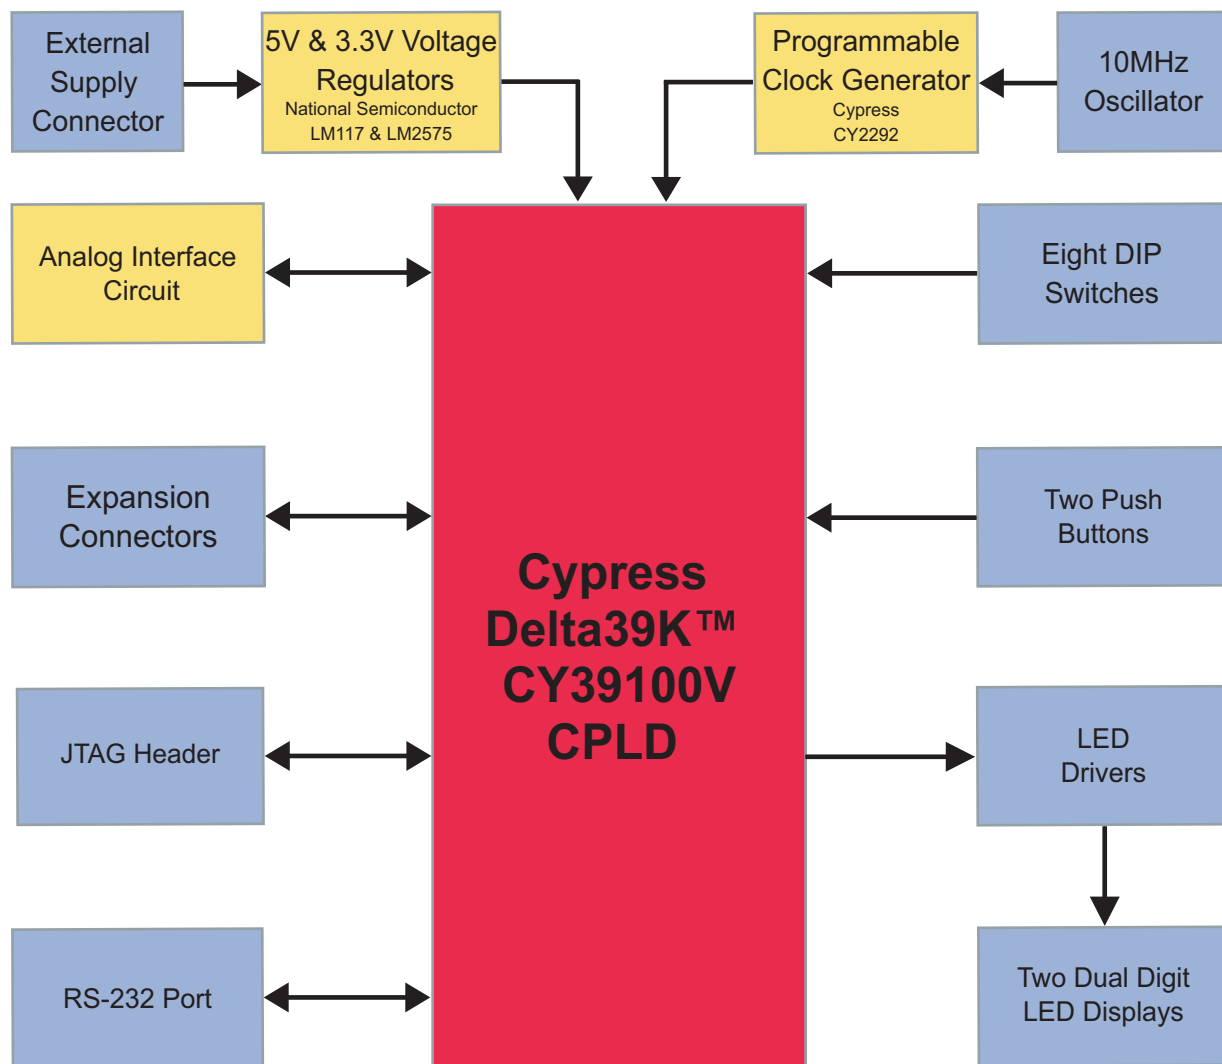

Features:

- ▲ Cypress Delta39K CY39100V388B-83MGC CPLD
- ▲ Cypress CY2292 programmable clock generator with 10MHz reference oscillator
- ▲ Analog interface circuit
- ▲ Regulated 5V and 3.3V supply voltages generated from external 8-10V supply
- ▲ JTAG port
- ▲ RS-232 port
- ▲ 8 DIP switches
- ▲ 2 push-buttons
- ▲ 2 dual-digit 7-segment LED displays
- ▲ Pads for 4 expansion connectors

Target Applications:

- ▲ Backplane applications
- ▲ Packet processing
- ▲ Encoding/Decoding
- ▲ Error correction
- ▲ Memory intensive designs
