

Avnet Avenue

National Semiconductor Dual High-Current Power Supply Kit

The Avnet designed National Semiconductor 28A DC-DC power supply board is a dual programmable Synchronous Buck Regulator. The design utilizes two National Semiconductor LM2636 Synchronous controllers. Each controller is capable of supplying 14amps with variable output voltages ranging from +1.3VDC to +3.3VDC. The board also has a +5VDC feed-through from the input source that can be used to supply a third voltage rail to the target board. A status signal indicating voltage is good on either output rail is also available at the target as well as an enable pin to shut both supplies off.

Features:

- ▲ +1.3 to +3.3VDC programmable output
- ▲ Power good flag and output enable
- ▲ Power sequencing between the two supplies
- ▲ Dependent or independent operation
- ▲ Over-voltage protection
- ▲ Current limit protection
- ▲ External ON/OFF control
- ▲ Meets Xilinx FPGA power requirements
- ▲ Miscellaneous
 - Multiple input power plugs
 - LED output indicators

The Dual High-Current Power Supply Kit includes:

- Evaluation board
 - Data sheet
 - Schematics
- Bill of materials
 - Gerber files
- 50W AC to DC (5V) power adapter

Target Applications:

- ▲ Primary power supply for complex electronic subsystems.
- ▲ High-current DC-DC power supplies
