

The Virtex™-E Development Board provides a complete and versatile platform for development of designs based on the Xilinx Virtex-E platform FPGA. Use of the Virtex-E Development Board enables engineers to reduce time-to-market and development costs with a comprehensive suite of peripherals and resources and unparalleled expansion capability through Avalon Reference Design System™ compliant daughter boards.

The Virtex-E Development Kit provides a baseline development Backplane, which incorporates a high density; high I/O Virtex-E FPGA, memory functionality, basic I/O functionality and interface connections for Development Module installation. The capability to install Avalon Reference Design System™ compliant daughter boards onto the Virtex-E Development Kit allows FPGA integration between multiple platforms and I/O standards if desired.
