

The Xilinx Virtex™-E Evaluation Kit from Avnet Design Services is used by engineers as a platform to develop and test designs that are targeted to the Xilinx Virtex-E FPGA family. The kit provides a stable environment in which to work, complete with tested sample VHDL code that exercises many of the evaluation board peripherals. A Xilinx XCV100E-6PQ240C device, capable of implementing over 100,000 system gates, is installed as the target for your designs. The Avnet Design Services Virtex-E Evaluation Kit is a reprogrammable development and prototyping hardware platform that can help shorten and simplify your design cycle. Development kits and engineering consulting services from Avnet Design Services help you get to market faster and easier than ever before.

The Xilinx Virtex-E Evaluation Kit includes:

- Xilinx Virtex-E evaluation board
 - User's guide
 - Schematics
 - Bill of materials
- Source code for sample designs

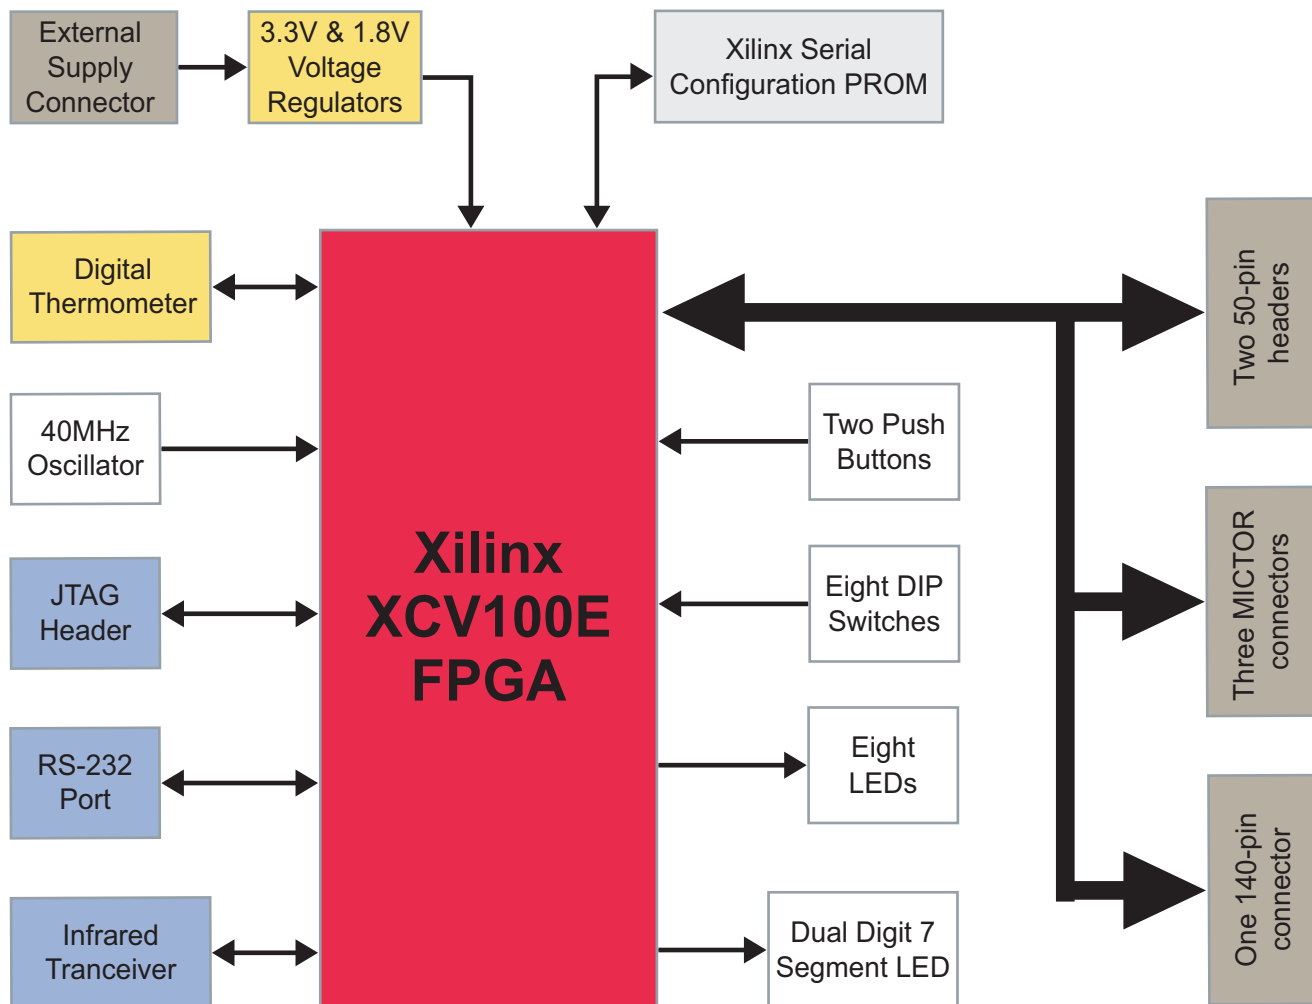

Features:

- ▲ Xilinx XCV100E-6PQ240C Virtex™-E FPGA
- ▲ Xilinx XC18V01SO20C serial configuration PROM
- ▲ Regulated 3.3V and 1.8V supply voltages generated from external 5V supply
- ▲ 40MHz oscillator
- ▲ JTAG port
- ▲ Connectors for access to FPGA I/O, including two 50 pin 0.1 header connectors, pads for three MICTOR connectors for easy logic analyzer connection and pads for one 140 pin connector
- ▲ 8 LEDs
- ▲ Dual-digit 7-segment LED display
- ▲ Infrared transceiver
- ▲ 8 DIP switches
- ▲ 2 push-buttons
- ▲ SPI 3-wire thermometer
- ▲ RS-232 port with level shifter

Target Applications:

- ▲ Networking
- ▲ Telecommunications
- ▲ Computing
- ▲ Video
- ▲ Digital signal processing
