NOTICE> The Selection guide of Large Block NAND Flash

MP2520F & VR3511F only support Small Block NAND boot. However it is possible to boot from Large Block NAND Flash if the NAND Flash supports PRE mode.

So customer wants to use Large Block NAND Flash must check whether the NAND Flash supports PRE mode or not. (Some Large Block NAND Flash does not support PRE mode)

For your reference, below <Table 1> shows SAMSUNG NAND Flash product lists that support PRE mode.

Capacity (Gbit)	Part Number	Maker
2	K9F2G08U0M	SAMSUNG
4	K9K4G08U0M	SAMSUNG
	K9K4G08U1M	SAMSUNG
8	K9W8G08U1M	SAMSUNG

<Table 1>

If a customer wants to use Large Block NAND Flash which does not in the above list, please be sure to check NAND Flash PRE mode support.

* What is PRE mode? : Power-On Auto-Read mode. An internal voltage detector of NAND Flash enables auto-page read functions when Vcc reaches about 1.8V. PRE pin controls activation of auto-page read function.
