

27Mhz VCXO CLOCK GENERATOR

Description

This high performance VCXO core is designed targeting at Set up box, MPEG Video Clock devices applications. This device accept 27Mhz, 20pf pullable crystal to produce a low jitter output at the same frequency. The control voltage input range can be from 0 to 3V range to tune the output clock frequency in the ± 100 ppm range. The design is in TSMC 0.13um process can also be ported to a different foundry.

Applications

Digital Satellite Receivers

Set top box

MPEG Video Clock Source

Features

- TSMC 0.13um process
- 3.3V operation
- 20pf pullable crystals with no external capacitors.
- ± 100 ppm tuning range
- Voltage input control with 0-3V control range
- 2mA current consumption
- CMOS level output(can be adjusted to core Voltage level)
