The Jazz VOIP IAD Processor (IAD) cores are highly optimized solutions specifically tailored to the evolving requirements of integrated access devices supporting voice-over-IP. The opportunities for supporting multiple channels of voice through different access points is growing significantly. The Jazz IAD cores can get you to market quickly and efficiently. They support a wide range of speech standards and are optimized for the high quality speech processing at a low cost. The IAD cores are part of the broad Jazz Voice family from Improv.

Voice-Over-IP telephony has made its way into the mainstream marketplace. Homes and businesses are equipping to support multiple phone channels connected through an IP network or directly into a POTS network. The Jazz Voice IAD solutions support a complete set of speech and telephony software modules that can be loaded from external memory; this allows a single core to support a broad range of standards.

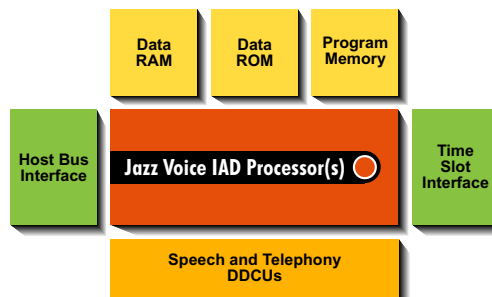

The Jazz IAD cores provide a complete package of telephony and speech processing. The cores are pre-configured and pre-optimized and come with a complete suite of telephony software modules. The cores have built-in interfaces for standard on-chip buses and memory management to allow direct drop-in into an existing SoC architecture.

OPTIMIZED CORES

The Jazz IAD cores can be used as a black box implementation of a complete voice processing subsystem on a chip. Each core can operate as a standalone block or as a slave to a host processor.

Each IAD core has a single, application-specific processor that combines a general-purpose instruction set with application-specific instructions to accelerate telephony processing. Each core contains a very-long instruction word (VLIW) processor built using Improv's Jazz Composer tools.

In addition to the processor, the hardware core contains embedded memory, a host bus interface (HBI) that can connect to most standard on-chip buses including AMBA, OCP and Wishbone, and an option Time Slot Interchange (TSI) block that allows direct integration with SLIC/SLAC interfaces and PBX equipment.

Highly efficient cores enabling rapid integration of complete speech processing.

KEY FEATURES

- Complete silicon-ready solution
- Optimized for multiple standards and multiple channels
- Complete telephony framework for a drop-in silicon solution
- Available in multiple configurations
- Fully synthesizable and foundry independent
- Supported by a comprehensive software development tool suite
- Optionally available as configurable cores for additional customization

IAD SOFTWARE MODULES

The IAD telephony software modules have been designed to fully exploit the unique advantages of the IAD architecture.

- G.711 Speech Codec
- G.726 Speech Codec
- G.723.1 Speech Codec
- G.728 Speech Codec
- G.729 a/b Speech Codec
- G.165/G.168 Line Echo Cancellation
- Comfort Noise Generation and Voice Activity Detection
- Caller-Id
- Fax Detection and Pass-Through
- Dial-Tone Management and Call Progress Tones
- Conferencing
- V.18 Hearing Impaired Support

JAZZ VOICE CORES

VOIP IAD PROCESSORS

AVAILABLE PRODUCTS

The Jazz Voice IAD family consists of the following specific products:

- **IAD Full 4 Channel Core** is a single processor optimized for 4 channels of any of the supported speech codecs.
- **IAD 726 32 Channel Core** is a dual processor optimized for 32 channels of either G.711 or G.726 speech codecs.
- **IAD Full 16 Channel Core** is an expanded dual processor optimized for 16 channels of any of the supported speech codecs.

Each core comes with complete telephony framework including time-division multiplexing of channels and PBX integration support.

IMPLEMENTATION CHARACTERISTICS

	<u>GATE COUNT</u>	<u>CLOCK</u>
IAD Full 4-Ch	xxxK gates	60 MHz
IAD 726 32-Ch	xxxK gates	120 MHz
IAD Full 16-Ch	xxxK gates	150 MHz

These numbers represent the maximum requirements for running the IAD Telephony Software modules in a TSMC 0.13um process. Low power is a critical component of a successful chip for these markets. The Jazz Voice IAD cores have been highly optimized for high performance at low clock rates and low power.

- Fully synchronous design
- Silicon-proven in 0.18um and 0.13um technologies
- Advanced power management features
- Hardware Debug Environment through JTAG port
- Support for prioritized interrupts
- Full scan with BIST for test
- Boot-loadable firmware and smart caching (Jazz Jukebox)
- No custom physical components required

DEVELOPMENT TOOLS

A complete software development environment called the Jazz Standard tool suite supports Jazz Voice cores. This tool suite includes compiler, debugger, assembler, cycle-accurate instruction-set simulator and profiler/analyzer. The environment runs on Windows XP Professional, Windows 2000 and Windows NT environments.

The cores also come with a complete implementation environment called the Jazz Generator which creates complete synthesizable RTL, EDA tool scripts, verification environment and FPGA mapping.

As a separately purchasable item, Improv offers a development platform using Improv's FPGA-Based Jazz Rehearsal cards with a full verification environment to enable verification and system integration. These boards are augmented by the Jazz Rehearsal Telephony Daughtercard allowing direct, real-time testing of telephony features.

DELIVERABLES

- IAD Processor Core
- IAD Telephony Software Modules
- Verification Environment
- Jazz Standard Tool Suite
- Jazz PSA Generator
- User's Guide
- Implementation Guide
- Programmer's Guide
- Jazz Composer Tool Suite (for configurable package only)

LICENSING INFORMATION

The Jazz Voice IAD cores are available today and can be licensed from Improv Systems. For additional information regarding the Jazz Voice family and other licensable Improv technology, please contact Improv Systems at sales@improvsys.com, or visit our website at <http://www.improvsys.com>. A list of worldwide local representatives can be found on the website.

ABOUT IMPROV SYSTEMS, INC.

Improv Systems, Inc. develops and licenses pre-configured and configurable Jazz Media, Jazz Voice and Jazz DSP cores. Improv's Jazz processor is a configurable DSP that allows designers to create optimized DSP cores targeted to consumer electronics and telecommunications markets. For more information, please visit www.improvsys.com.
